# Report N:2404 "Aliens in America"

The data was collected by the agent: Ian K.  
The data was analyzed by the agent: Gell A.

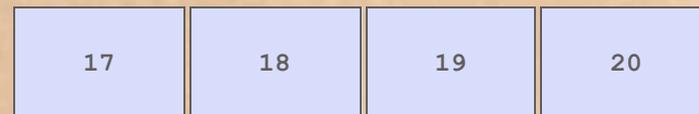

### Count of aliens by type

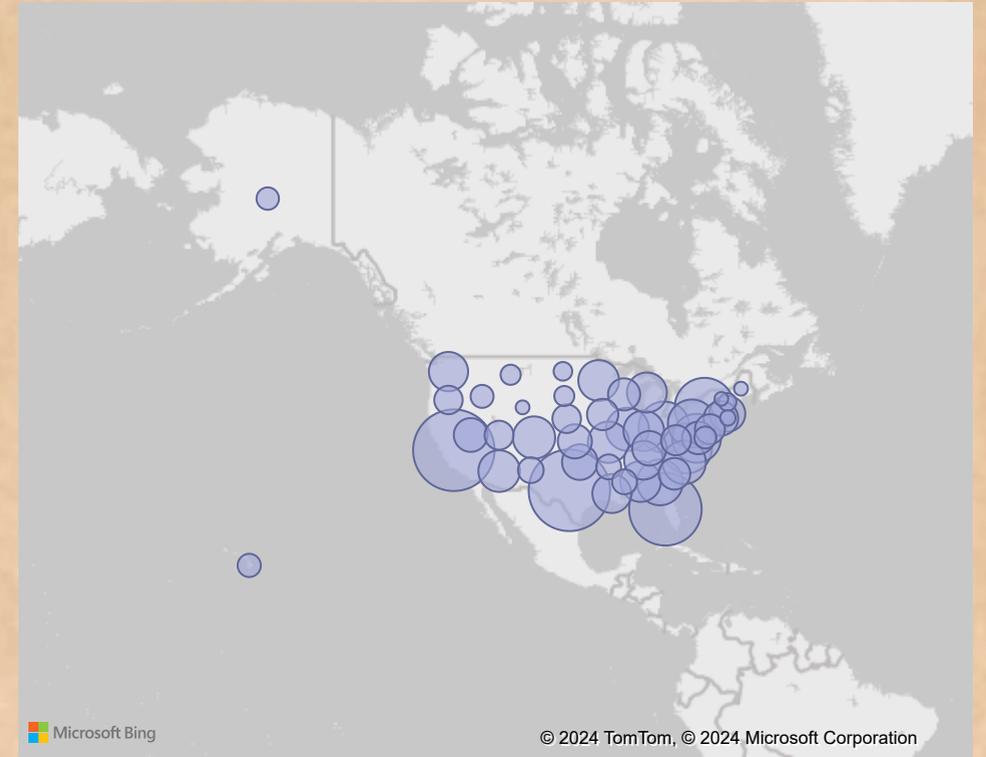

type ● Flatwoods ● Nordic ● Reptile ● Green ● Grey

century

### Where did aliens meet :

In America only, 50,000 aliens (of five different species) were found, which, starting in the 17th century, settled across 51 states. Who knows how many we haven't found yet?

50000

Total population

50000

Count of aliens

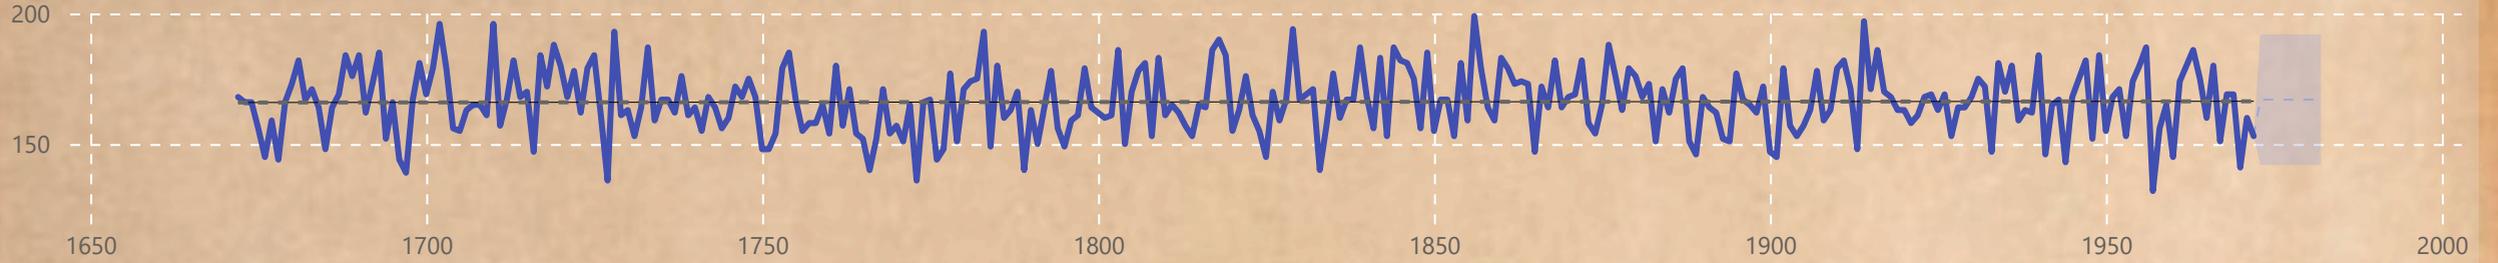

51

Count of states

3 4 5 6

Number of aliens born in each of the indicated years

Number of souls

Living aliens were born from the late 17th century to the late 20th century, so the oldest alien is now 352 years old, and the youngest is 52 years old. And it is not yet possible to establish their average life expectancy.

Some information about who was born in the years mentioned

<u>birth_year</u> ×	<u>type</u> ×	<u>gender</u> ×	<u>aggressive</u> ×
1702	Reptile	Female	

century

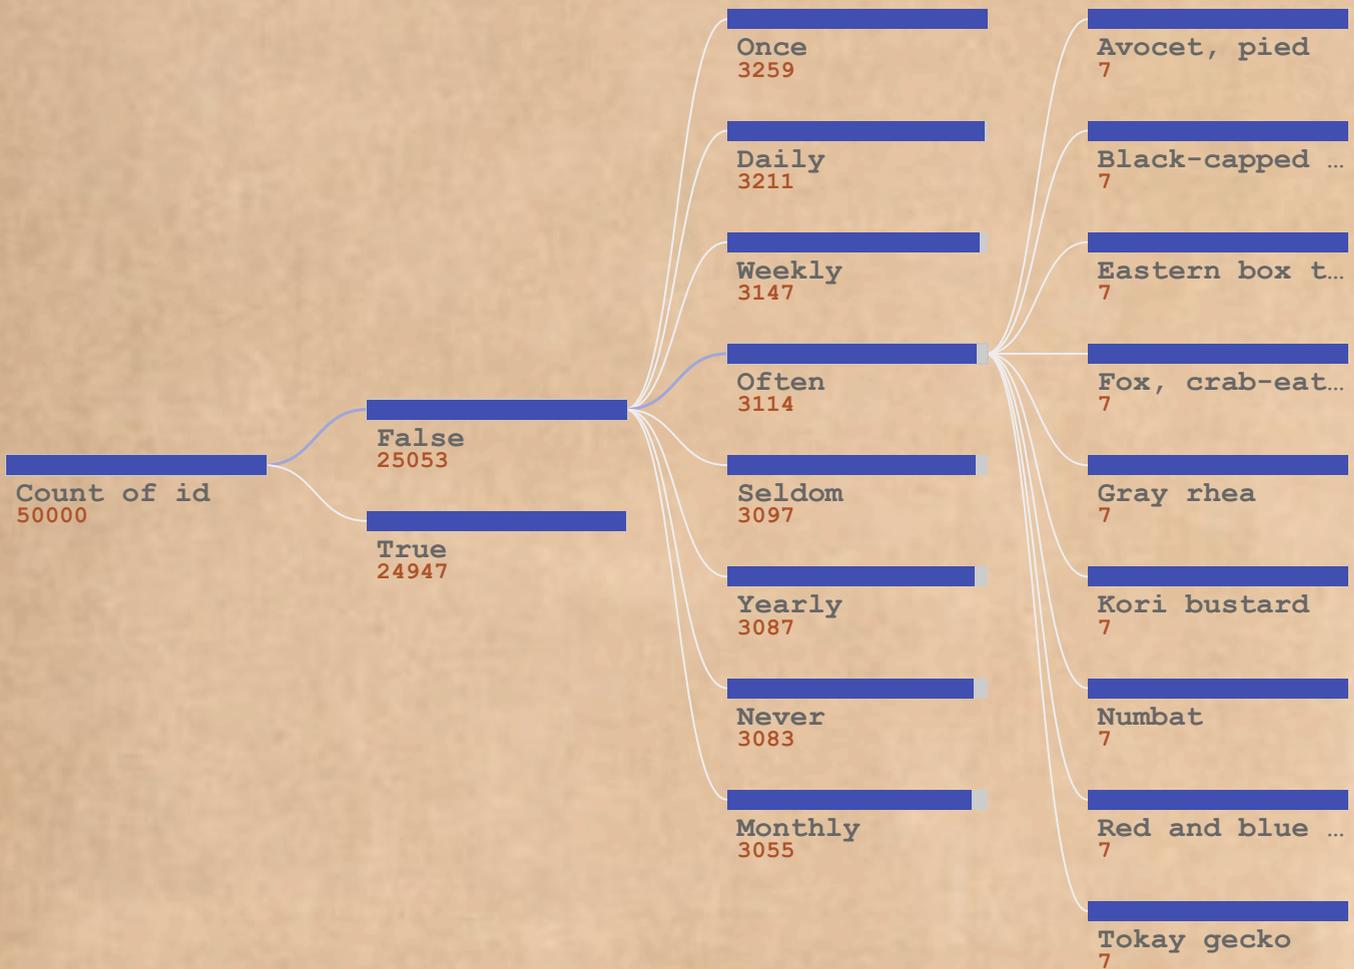

17	19
18	20

- X -

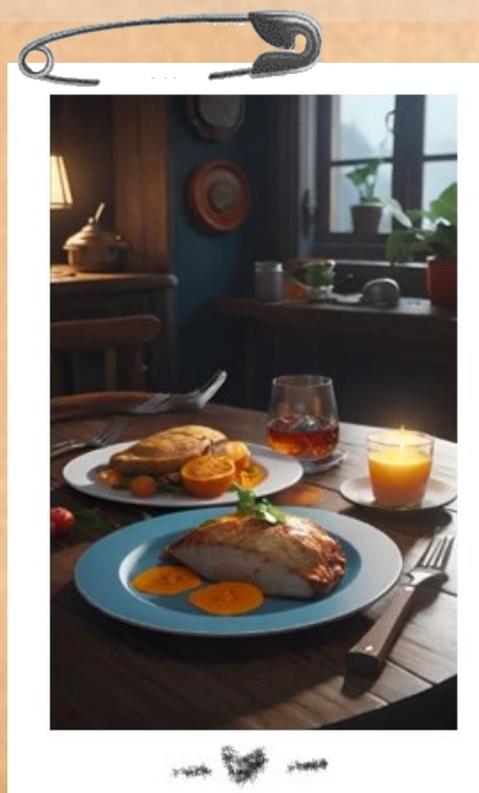

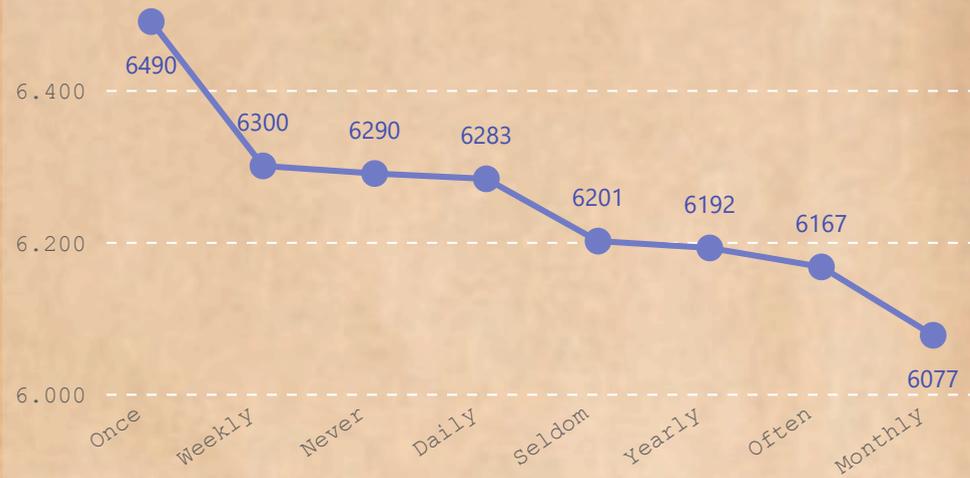

The maximum number of aliens born in a year was in 1856. 199 souls. Possible cause: industrialization, revolution in the transport system, abolition of slavery, start of the gold rush...

# Some information about the eating habits of aliens

aggressive × feeding\_fre... × favorite\_fo... ×  
 False Often

# Count of aliens by feeding frequency

It turns out that aliens eat at different frequencies, and it seems we have taught everyone to love food, even those who never planned to eat...

### Count of aliens by state and gender

It turns out that aliens classify themselves as one of eight genders. But among them, just like us, the majority are men and women.

### Count of aliens by gender

- X -

# And here are a few more observations:

They try to choose unique, but quite earthly names. There are few repeating names among them: Dannie(23), Dory(22), Jan, Frannie(21)...

A certain percentage of their names go funny with their last names. People wouldn't call themselves that.

The data records 17,701 aliens with a unique surname of various ages. It's hard to believe that they simply have no relatives left. Most likely, they have a different principle of inheriting a family name, or they simply flew to Earth alone.

Some of their surnames have endings characteristic of surnames of other nationalities. Does this mean that before the census, these aliens had citizenship of other countries, or did they simply each take a surname whichever they liked?

All aliens have email, but, as if on purpose, they set up addresses on different servers. This makes it harder to keep track of them.

All living aliens are adults, so no more than three bearers of the same surname live in one state.

25 of their names consist of only two letters. And the longest name (Helen-elizabeth) has 14 letters. Because of this, the average name length for them is: 1.01244 letters.

Aliens of different species can belong to the same surname, which means they have a tradition of taking the surname of their husband or wife.

The choice of state and place of residence was clearly made with an eye on whether the state was rich and populous, and what its climate and nature were like.

The largest number of aggressive aliens are among flatwoods. But we suspected the greys.

Among them, 430 work as teachers.
